Chief Complaint

Malaria

History of Present Illness (HPI)

Patient presents with a 4-day history of fever, associated with chills, body weakness, and intermittent headache. Fever is worse at night and temporarily relieved with over-the-counter medication. Patient also reports loss of appetite and generalized body aches. No vomiting, cough, or diarrhea. No history of recent travel outside the area.

Review of Systems (ROS)

General: Fever, chills, fatigue

Neurological: Headache; no dizziness or loss of consciousness

Musculoskeletal: Generalized body aches

Gastrointestinal: Poor appetite; no nausea, vomiting, or diarrhea

Respiratory: No cough or difficulty breathing

Physical Examination

General: Patient appears ill but alert and oriented

Vital Signs: Elevated temperature

Skin: Warm to touch, no rash

Abdomen: Soft, non-tender

Other Systems: No significant abnormalities noted

Assessment (Diagnoses)

- Suspected uncomplicated malaria
- Fever, unspecified

Plan

- Request malaria rapid diagnostic test (RDT) or blood smear
- Start antimalarial treatment as per facility protocol
- Encourage adequate fluid intake and rest
- Prescribe antipyretic for fever
- Advise patient to return immediately if symptoms worsen
- Schedule follow-up after treatment completion
